

Peer Reviews for Project 0 – Website

Sawyer Cowan – CSCE 315

BEN

Great landing page! The animation is a neat touch. However, I recommend finding a different font may amp up the aesthetic appeal. Another recommendation is to add a nav bar, which you can find how to do that here: https://www.w3schools.com/css/css_navbar.asp. The nav bar could help the user go between all the pages a little easier, rather than only going up the index tree before going to another child page. About Me page looks great, just font could be different. On the professional page, splitting the paragraphs could fill out the left column a little more, making it easier to read. The Portfolio page is simple and clean. I also really like the tab-look on the Contributions page; keep the look, but maybe add a picture or two above the tabs. Overall, great job with the functionality!

DEEPANSH

Awesome job with that first-glance factor! I appreciate the site being easy on the eyes, while remaining professional. I also appreciate that you made your website responsive (mobile compatible). It may have been that you ran out of time, but be sure to upload the images you want to use in your portfolio. I also like how you added your Contact Me portion at the end of the page. One thing I would recommend is making the buttons have a slightly different background color. You have the :hover enabled, which is great, but at first I didn't even see the "Professional" or the "Service" button. It's up to you, but maybe a light gray color for those would be helpful for the user. Also, don't forget to insert your `<a href>` in the social media buttons. Overall, great job with the functionality and aesthetic appeal.

MATT

I like the Space Jam look! Might recommend, now that you have the structure of your pages, increasing the font would be helpful. Also, here is a link how to make a basic nav bar that helped me: https://www.w3schools.com/css/css_navbar.asp. I would recommend adding this basic navbar to every page so that way it's easy for the user to go back and forth between the pages. Also, since the child pages are basic at the moment, I would recommend styling the body and `<p>` tags so that there is a margin on both sides so that it shifts everything towards the center. Smaller content should be centered and left-aligned (if it's a paragraph). Other than those things, great start your website!
